

# Electric Scooters

**Raven**

**Arctic**

**Slate**

GO electric scooters are fun and easy to ride. With a stylish, ergonomic design, exceptional travel range and fold-down storage capabilities, they can go anywhere life takes you.

The battery can be removed for remote charging or battery swapping and it features a USB charger to charge your mobile phone while on the go. Headlights and safety awareness lights protect the rider whilst riding at night.

## Strong

With a sturdy aluminium alloy frame and chassis, GO scooters can handle the toughest terrain. Plus, with an exceptional carrying capacity of 150 kgs, anyone can just hop-on and go!

## Comfortable

The GO's base suspension is perfectly balanced to give you a smooth ride, no matter the journey

## Electric Brakes

Positioned on the handlebars and operated with your thumb, your brakes will never lock, and bring you to a smooth, safe stop. Unlike traditional brakes, there are no annoying cables requiring manual adjustment.

## Removable Battery

GO Scooters have their battery located in the lockable steering column. The battery can be removed for remote charging or, for extra-long rides, a backup battery can be stored in your backpack.

Such convenience and portability makes the GO ideal for e-scooter hire companies. Just swap out the existing battery and its back on the road.

## Lights

No other electric scooter offers driving lights and feature lights as smart as this. Brake indicator lights turn the handlebar red while the front facing smart feature lights add superior visibility in low-light conditions.

## USB Charger

Your GO doubles as an emergency power bank. Use the USB charger to charge your mobile phone, camera, headset and more.

## Lights

Forward facing LED feature lights in the front column are permanently illuminated whilst in motion. This improves visibility and safety, especially at night or in low lighting situations. Twin driving lights that switch on from the console can also be used for night riding. Brake activated LED's on the tips of the handle bars provide side and rear braking warnings.

## Range

9 Ah battery – 18 to 28 kms

*\* This is an estimated range only.*

*Actual range will vary according to terrain, weight of rider, riding conditions and riding style.*

## Available Colours

Arctic

Slate

Raven

## Maximum Load

150 kg

## Three maximum speed settings

Top speed of your VAYA GO can be limited by selecting one of the following from the console.

7 km per hour

15 km per hour

25 km per hour

Maximum speed is approximately **25 km** per hour depending on rider weight, level of battery discharge, riding conditions, riding style etc.
